

mandorla, resembling the shape of the cushion with protruding tied ends, likely represents a misinterpretation of the original Indian design. Interestingly, a similar error in transregional transmission is also present in the Tangut-era Cave 465 in the Mogao Grottoes in Dunhuang. In Cave 465, the cushion-shaped backscreen painted behind a bodhisattva holding a flower mirrors the “cloud-shaped mandorla” of the Kṣitigarbha statue in Guangyuan.³ This repeated mistake in artistic replication across thousands of kilometers, in addition to the substantial temporal gap between the two examples, highlights the challenges and complexities inherent in the dissemination and localization of Buddhist art in the Pan-Asian area.

How should we interpret the appropriation and misrepresentation in the Thousand Buddhas Cliff in Guangyuan? Both Buddha and Kṣitigarbha are depicted wearing monastic robes, with cushions or mandorlas placed behind the statues. These formal similarities played a significant role in reinterpreting the “Indian Buddha image” as a Kṣitigarbha image. This is not an isolated case, there are also instances in Guangyuan where Buddha statues are carved with gestures originally used for bodhisattvas. For instance, some statues from the same period are depicted with one hand raised, forming a sharp V-shape with the forearm and upper arm – a gesture typically seen in bodhisattva images in Indian styles, similar to the flanking bodhisattvas on the “Indian Buddha Image” clay tablets. Therefore, the appropriation of the Kṣitigarbha image should not be viewed as a spontaneous act of creativity but in conjunction with how Chinese artisans

utilized newly introduced image elements to create Indian-style Buddha statues in the early Tang Dynasty. This appropriation of features with an apparent disregard for the original iconographic canon, specifically between Buddha and bodhisattvas, suggests that local artisans at that time may have had considerable freedom in the creation of sacred images with the new exotic style.

New Discoveries and Research on Murals in Tibetan Buddhist Monasteries

WANG Ruilei 王瑞雷

In recent years, scholars based in China have conducted research on the cultural heritage of Tibetan Buddhism from various perspectives, resulting in a series of archaeological reports as well as case studies on particular traditions and specific monasteries. Included among these studies is a systematic study of Tholing Monastery 托林寺, the royal temple of the Guge 古格 Kingdom in the Ngari 阿里 region of Tibet, through examination of recently discovered materials and surviving murals depicted in the main hall.

Tholing Monastery, founded by Yeshe-Ö (Ye shes ’od, 947-1024), a descendant of the Tubo Dynasty, served as the political and religious center of the Guge Kingdom, which was the historical site of the Zhangzhung civilization. The monastery was not only the place where the Guge royal family conducted political affairs and issued decrees, but also a sacred site marking the beginning of the Later Diffusion of Buddhism in Tibet. Recent archaeological discoveries and research on Tholing Monastery centered on two main aspects.

Firstly, in August 2016, the north-side riverbed around Tholing Monastery slipped, resulting in the collapse of some early-stage stupas that had stood on the edge of the riverbed into the Xiangquan River. Therefore, the Institute of Cultural Relics Protection of the Tibet Autonomous Region and some other units relocated the endangered stupas. During this process, a large number of invaluable Buddhist *tsha-tsha* tablets in stupa shape and handwritten manuscripts were unearthed from the six relocated stupas. Notably, pages of a historical document from the 11th-12th century were found in a stupa partially collapsed into the valley [Figs.1-2]. The document recorded a range of important information, including wars between Guge and Glo yul 洛域, donation relationships between the Guge royal family and Tholing Monastery, land disputes between pastures and monasteries, as well as royal commendations and warnings to officials and loyal citizens. These documents are the earliest official documents of the Guge Kingdom discovered in western Tibet, providing valuable firsthand materials for scholars to understand the official documentation characteristics of the Guge Kingdom. The format, writing style, seal patterns, and preventive measures such as inked lines on the left margin of the documents are very similar to the official documents issued by the Dunhuang Tubo Dynasty. These findings offer precious materials for further understanding of the relationship between early Guge official documents and Tubo documents, as well as exploring the political and religious relationships and social conditions of the Guge Kingdom around the 11th-12th centuries. As such, these discoveries hold significant historical value.

Another breakthrough lies in the research on the Red Temple of Tholing Monastery. Constructed under the reign of the Guge King Khri nam mkha’i dbang po phun tshogs lde (1409-1481), the Red Temple constitutes the largest surviving Buddha hall from the Buddhist revival period of the Guge Kingdom in the 15th-16th centuries. Serving as an important ceremonial space for the royal family to worship, its murals reveal the early political and religious strategies of the Guge Kingdom, providing invaluable clues to the complex political and religious history of the middle-to-late Guge Kingdom. The

mural configurations reflect the complex interactive relationships and religious discourses between sects of western Tibet and Ü-Tsang regions. My recently published book, entitled *A Study on the Murals of the Red Temple of Tholing Monastery: History, Images, and Texts* 托林寺红殿壁画研究：历史、图像与文本, resolves issues regarding the specific builders and the construction period of the Red Temple [Fig. 3]. Through comparative research on murals of similar themes from early and contemporary periods in the Ali and Ü-Tsang regions, and in conjunction with tantric texts and related rituals and practices, I reinterpret the content and teachings depicted in the murals of the Red Temple. This reconstruction elucidates the traditions of early Guge teachings and their interactions with the political and religious spheres of the Ü-Tsang region. Through detailed textual analysis of the murals, the book presents the historical landscape of the revival of Buddhist art and political expression in the Guge Kingdom during the 15th and 16th centuries.¹
